

# Support Vision for Life

Meet Inspire: low vision assistive technology re-imagined to help your patients seamlessly achieve their goals for daily living.

For distance, intermediate, or near tasks, this vivid, high definition view offers instant auto focus and an industry-leading 77° field of view with up to 14X magnification.

Reading is the number-one goal for most people with low vision: to read bills, mail, pill and food labels, and more. IrisVision's software makes reading as intuitive as a pair of regular glasses.

If watching a movie, sports or show on TV is among your primary goals, TV Mode makes it simple. A few small adjustments on your Inspire headset and you're ready to go.

Inspire is a low-profile wearable software platform delivering functional sight for low vision. From the team that developed the multiple award-winning IrisVision Live headset, Inspire is a lightweight, all-in-one, all distance, and autofocus solution designed for intuitive ease-of-use.

Only Inspire offers a growing software platform with two years of unlimited cellular data to keep users connected and supported wherever they are.

# Meet Inspire.

## For Patients With

- Macular Degeneration
- Diabetic Retinopathy
